

November 21, 2021

Dear Parents and Guardians,

Algoma Public Health (APH) is advising you that an individual(s) associated with **Ecole Ste. Anne**, has tested positive for COVID-19. We recognize that receiving this information may be stressful. To help you understand what actions are being taken, and what to expect, please review the important information below.

At this time, APH is conducting a careful investigation to identify high-risk contacts. **If your child was in attendance at Ecole Ste. Anne on November 19, 2021, your child has been identified as a high risk contact.** When someone tests positive for COVID-19, APH conducts a thorough investigation to determine the time period when that person was infectious, and would have been able to spread the virus to others. A person with COVID-19 can spread the virus to others 48 hours (or 2 days) before the person had any symptoms or tested positive for COVID-19. Examples of high risk contacts include household members, individuals within the same class, individuals who have been in direct physical contact, and individuals who have spent more than 15 minutes together within 2 metres, such as, sharing a meal or being in the same carpool. Brief interactions, like walking past someone in a hallway or on the sidewalk, are not considered high-risk contact situations.

As you work through the below pathways as a high-risk contact, it is critical that you ensure the accuracy of your self-attested vaccination status (i.e., unvaccinated vs. vaccinated). Falsifying your or your child's vaccination status can pose significant risk of COVID-19 to school peers, families, and colleagues. Our goal is to create a safe and healthy school year for all in Algoma. We all have to do our part.

Please also follow the directions below for FULLY VACCINATED and NOT FULLY VACCINATED or NOT VACCINATED individuals.

Next steps, such as getting COVID-19 testing and self-isolating at home are as follows:

- A. If your child has no COVID-19 symptoms and is **NOT FULLY VACCINATED or NOT VACCINATED**:
- The child must isolate, and should get tested between day 7-10 (**November 26-29**) or right away if the child develops symptoms. If the child does not test, there may be times when APH may potentially need to extend the isolation period another 10 days
 - Regardless of test result, the child is required to **isolate for 10 days, until November 29, 2021 at 11:59 PM.**
 - Isolation means you must stay home and not go to work or school. Do not gather, visit or have visitors or play dates while you are isolating
 - Unvaccinated household members must stay home except for essential reasons such as work or school during the child's isolation period
 - Fully vaccinated household members are not required to stay home or isolate
 - Under the Section 22 Class Order issued by Algoma's Medical Officer of Health, anyone in Algoma who has confirmed or suspected COVID-19 infection, or who is identified as a close contact requiring isolation, must isolate and follow public health instructions. Not complying with this legal order is an offence and a person may be liable for a set fine of \$750 or otherwise of up to \$5,000 per day or part of each day that the offence continues, on conviction

B. The child HAS / DEVELOPS SYMPTOMS OF COVID-19

- The child must isolate and should get tested immediately if they develop any of the following symptoms:

Fever and/or chills (temperature of 37.8 degrees Celsius/ 100 degrees Fahrenheit)

Cough or barking cough (croup)

Shortness of breath

Decrease or loss of taste or smell

Nausea, vomiting and/or diarrhea

Fatigue

Muscle aches and pain

Sore throat

Runny or stuffy nose

Abdominal pain

Headache

Conjunctivitis (pink eye)

Decreased or lack of appetite

- Call APH at 705 942-4646 ext. 5404 for further directions for the child and their household members.

If the child must isolate and is too young to isolate away independently, assign a caregiver who will stay with the child for the isolation period. Having one parent or caregiver care for the child, if practical, can reduce the risk of COVID-19 spread to other household members. Ideally, the caregiver should not be someone at high-risk of a serious outcome from COVID-19 (i.e. elderly, immunocompromised, etc.). More information regarding isolation and how to care for a child who needs to self-isolate can be found [here](#).

We are working with the school to review and confirm important practices to reduce the potential spread of COVID-19, including:

- Ensure COVID-19 vaccination policies are in place
- Screening practices in place for children and staff
- Staying home if you have symptoms of COVID-19
- Cleaning and disinfecting high touch surfaces
- Using personal protective equipment when appropriate (e.g., medical mask, eye protection)
- Proper hand hygiene practices
- Posting signage of appropriate public health measures (e.g., hand hygiene, coughing and sneezing etiquette)
- Maintaining and encouraging physical distancing

Algoma
PUBLIC HEALTH
Santé publique Algoma

- Supporting case investigation and contact tracing when there is an individual who has tested positive including identifying students and staff that may have been in greater contact with individuals who have tested positive

Important ways to protect yourself and others:

- Be fully vaccinated by receiving 2 doses of COVID-19 vaccine if you are eligible
- Always practice physical distancing
- Wear a mask or face covering in all indoor public settings
- Wear a mask or face covering outdoors if physical distancing cannot be maintained
- Wash your hands often with soap and water, or use an alcohol-based hand sanitizer
- Clean high touch surfaces in the home (doorknobs, toilets, keyboards, electronic tablets, remote controls etc.)

For more information:

Please visit the APH website for information on [COVID-19](#) or call 705-942-4646 ext. 5404.

Sincerely,

Algoma Public Health
